

CryptoRuble (RUBC) Whitepaper v1.0

1. Introduction

CryptoRuble (RUBC) is a decentralized token on the Polygon PoS network, created as a digital model of the Russian ruble. The purpose of the project is to provide a simple and transparent unit of value for trading, community activities, and experimentation within the DeFi ecosystem.

2. Key Parameters

Network: Polygon PoS Contract Address:

0xA305E32e19Ef4DA30d2cA29Abb46300e7C46b8c6 Standard: ERC-20 Decimals: 18

Ticker: RUBC Total Supply: [insert your total supply at deployment]

3. Tokenomics / Distribution

Initial Liquidity (QuickSwap Pools): 5% of supply (pairs RUBC/POL and RUBC/USDT)

Community & Airdrops: 25% — for early users, rewards, and campaigns Team & Founder

Reserve: 10% — locked for 12 months Ecosystem Development: 30% — future integrations (DeFi, NFT, utility) Public Reserve: 30% — remains in the smart contract for flexible distribution

4. Token Utility

Trading through liquidity pools RUBC/POL and RUBC/USDT Participation in community activities (votes, campaigns, airdrops) Experimental integrations in NFT and DeFi applications Educational purpose — showcasing a simple model of a 'digital ruble' on blockchain

5. Roadmap

Q3 2025: contract deployment, PolygonScan listing, creation of liquidity pools Q4 2025: listing on CoinGecko and CoinMarketCap, community growth 2026: integrations into NFT/DeFi, liquidity expansion

6. Conclusion

CryptoRuble (RUBC) aims to remain transparent, simple, and accessible, maintaining a clear tokenomics structure and straightforward principles for users worldwide.
